Scout feasibility test: AI news to kids' bedtime stories

Test run: Nov 6, 2026, 11:34 AM PT (fetch time). All dates below are Pacific Time unless stated as UTC. Model: Muse Spark 1.3 (this agent). Method: Python requests with a browser user agent for RSS and article fetching, plus manual LLM claim checking and rating by the same model. See section 2 for limits. Feeds tested: TechCrunch AI, MIT Technology Review AI, The Verge AI, OpenAI News. Raw data files: `feasibility-test/all_feed_items.json`, `feasibility-test/fulltext_results.json`, `feasibility-test/fetch_log.txt`, `feasibility-test/fulltext_log.txt`.

Dedup rule for S1: merge two items only when they cover the same specific announcement, product, deal, or launch. Do not merge items only because they share a broad topic (for example, the 2026 midterm election). Same link would also merge, but there were 0 exact duplicate links in Nov 4 to 6. Usable definition for S1: a unique story with a text article, not a podcast-only or video-only item. Podcast-only and video-only items are counted separately below.

1. S1 to S5 results table

#	Result (with numbers)	Pass?
S1	Unique stories per day (PT date): Nov 4: 7, Nov 5: 18, Nov 6: 13 (partial day, fetched 11:34 AM PT). Raw items were 7, 21, 16 (total 44 raw, 38 unique, 6 removed as duplicates). Stories in 2 or more feeds: 5 events total (Nov 4: 0, Nov 5: 3, Nov 6: 2). No story appeared in 3 or more feeds. Usable text stories per day after removing podcast/video-only items: Nov 4: 7, Nov 5: 18, Nov 6: 11. All 3 days are above the threshold of 3.	Pass
S2	RSS summaries, all 44 items Nov 4 to 6: average 1.8 sentences, range 1 to 4 sentences, average 33.0 words, range 13 to 56 words. For the 10 selected stories: average 2.1 sentences, range 1 to 4, average 38.4 words. Full text fetch: first attempt 9 of 10 succeeded, after 1 retry 10 of 10 succeeded. Clean word counts: average 836 words, range 196 to 1,945 words. Shortest were The Verge articles at 196, 212, and 384 words. Longest was OpenAI GPT-6 Cyber at 1,945 words.	Pass
S3	40 source claims checked, all 40 marked "in source" correctly. 3 planted false claims added (1 each to 3 stories), all 3 marked "not in source" correctly. Total 43 of 43 claims marked correctly, 100 percent. Threshold was 80 percent. 10 of 10 stories had all of their claims marked correctly. Limit: the same model wrote the claims and checked them, so this is a self-check, not an independent check. See section 2.	Pass
S4	3 stories, 3 differently worded prompts each, scores 1 to 5. GPT-6 Cyber: 5, 4, 4 (range 1). Muse Spaces: 4, 3, 4 (range 1). Texas data center: 4, 3, 4 (range 1). All 3 stories stayed within 1 point. Limit: prompts were run in sequence by the same model in one session, so scores may be anchored. See section 2.	Pass
S5	20 stories rated: 9 green, 8 yellow, 3 red. All 20 have a title, link, rating, and one-line reason in section 5.5. No pass threshold was set for S5 in the test plan; the task was to produce the 20 ratings for later hand-labeling.	Pass

2. AI method

Model used: Muse Spark 1.3, the model running this test. No separate API model was called. All LLM judgments in S3, S4, and S5 were made by this model in this session.

Prompt approach:

- S3: For each of the 10 stories, I wrote 4 factual claims in plain language from the fetched full text, as a draft story would state them. I then checked each claim against the full text and recorded "in source" with a short verbatim quote, or "not in source" with no quote. Then I added 1 made-up claim to 3 stories (humanoid robot, GPT-6 Cyber, Perplexity Teammates) and checked those the same way. Source used was full text for all 10 stories, because all 10 fetches succeeded after retry. No story fell back to summary only.

- S4: Three prompts, worded differently, applied to the same 3 stories. P1: "Rate 1 to 5 how well the claims in this story are supported by its source article. 1 = mostly unsupported, 5 = fully supported with specific evidence." P2: "You are a fact-check editor. Give a confidence score 1 (low) to 5 (high) for this story based only on the source text provided. Be strict about numbers and names." P3: "How trustworthy is this story for a kids' app, on a 1 to 5 scale, judging only whether each claim can be traced to the source?" The strict editor prompt (P2) gave the lowest score in all 3 cases, by 1 point.
- S5: One prompt for all 20 stories: rate green, yellow, or red for ages 5 to 10 using the definitions in the test plan, with a one-line reason. Ratings for the 10 S2 stories used full text. Ratings for the other 10 stories used title plus RSS summary only, because full text was not fetched for them. That is a limit on half of S5.

Quality: 10 of 10 stories had all claims marked correctly in S3 (40 of 40 source claims plus 3 of 3 planted false claims).

Approximate cost and time per story: Cost could not be measured from this run, because no per-call billing meter was exposed to the agent. Do not quote a dollar cost from this test. Time measured by tool: RSS fetch of all 4 feeds took about 3 seconds. First full-text pass for 10 articles took about 37 seconds total, about 4 seconds per article. The OpenAI retry took about 4 seconds. LLM reading, claim checking, confidence scoring, and rating took longer and was not separately metered; as a rough manual-test figure, allow 2 to 3 minutes per story for claim extraction plus checking. That is a manual-test figure, not a production pipeline figure. A production pipeline that calls an API once per story would be faster, but its cost and time were not measured here.

Limits to report honestly: S3 and S4 were self-checks by the same model that wrote the claims and the scores, in one session. A second, independent checker (a different model, or a human spot-check) is still needed before trusting the 100 percent S3 figure. S5 ratings for 10 of 20 stories were RSS-only.

3. Risks, "Did it happen?"

(a) News sites block the scraper. Did it happen? No. All 4 RSS feeds returned HTTP 200. All 10 article URLs returned HTTP 200. No 403, no CAPTCHA, no login wall was hit. Two cautions: (1) the OpenAI article timed out once after 30 seconds on the first attempt and succeeded on retry with a 60 second timeout, so the failure was a timeout, not a block; (2) MIT Technology Review and The Verge HTML contained the words "paywall" and "metered" in page templates, but the full text was still returned for both MIT articles and all 3 Verge articles, so those words alone did not mean a block on Nov 6.

(b) No AI news on some days. Did it happen? No for the combined 4 feeds. Nov 4 had 7 unique stories, Nov 5 had 18, Nov 6 had 13 by 11:34 AM PT. Yes for single feeds: TechCrunch had 0 items on Nov 4, The Verge had 0 on Nov 4, MIT had 0 on Nov 5, and MIT had a 2-day gap between Nov 4 and Nov 6. A Scout that depended on one feed would have empty days. The 4-feed combination covered every day.

(c) LLM marks an unsupported claim as verified. Did it happen? No in this test. 0 of 43 claims were marked wrong. All 3 planted false claims were marked "not in source". Limit: the checker was the same model that wrote the claims, so this test is weak for this risk. It shows the checker can catch obvious inventions, not that it will catch subtle number changes or paraphrase drift.

(d) Feeds delayed by 12 or more hours. Did it happen? No for the latest item in each feed at fetch time (Nov 6, 11:34 AM PT). Lag to the latest item: TechCrunch 0.8 hours, The Verge 1.4 hours, MIT 9.6 hours, OpenAI 11.6 hours. OpenAI was 0.4 hours short of the 12-hour threshold, and its items are timestamped at midnight PT, so its lag measure is coarse. MIT published nothing on Nov 5, which is a 24-hour-plus gap for that feed alone. A daily Scout run should not rely on OpenAI or MIT alone for freshness.

4. Discoveries

1. RSS summaries are too thin to write a story from. Across 44 items, the average summary was 1.8 sentences and 33 words. OpenAI summaries averaged about 1 sentence and 20 words. The pipeline must fetch full text; RSS alone is only a pointer.
2. The Verge articles are genuinely short. The 3 Verge full texts were 196, 212, and 384 words, with only 4 to 5 body paragraphs each. TechCrunch ranged from 577 to 1,318 words, MIT from 842 to 1,417 words, OpenAI GPT-6 Cyber was 1,945 words. Short source text limits how many checkable claims a story can carry.

3. The same story appears in different words across feeds, and TechCrunch republishes the same text as video and podcast. The GPT-6 Cyber launch, the Airbnb AI travel agent, the Meta Muse voice mode, the Amazon Alexa text feature, and the Meta Muse Spaces launch each appeared in 2 feeds. TechCrunch's Nov 6 midterm video and podcast shared an identical 56-word summary. Dedup by link alone finds 0 duplicates; dedup by event finds 6.
4. The news on Nov 4 to 6 was dominated by one broad event, the 2026 midterm election. At least 5 of the 38 unique stories were about election results and data centers, plus 2 more about IPO and spending. A kids' app that picks 3 to 5 stories a day will often face a day where the top news is politics, finance, or hacking, not a kid-friendly robot or gadget story.
5. OpenAI's feed returns its full archive in one response: 1,368 items from OpenAI alone, out of 1,408 items fetched across all 4 feeds. Filtering by publish date is required, and it works: only 11 of the 1,368 OpenAI items fell on Nov 4 to 6. The feed also timestamps items at midnight PT, so date filtering is exact to the day but not to the hour.

5. Evidence

5.1 S1: raw counts and unique counts

Raw items by feed and PT date:

Feed	Nov 4	Nov 5	Nov 6 (to 11:34 AM PT)	Feed total in this window
TechCrunch AI	0	12	8	20
MIT Technology Review AI	2	0	1	3
The Verge AI	0	4	6	10
OpenAI News	5	5	1	11
Raw total	7	21	16	44

Unique stories after event dedup: Nov 4: 7, Nov 5: 18, Nov 6: 13. Total unique: 38. Duplicates removed: 6.

Duplicate events merged (each pair counts as 1 unique story):

- Nov 5: OpenAI GPT-6 Cyber launch (OpenAI News plus TechCrunch "OpenAI released a new cybersecurity model. Is that enough?").
- Nov 5: Meta Muse voice mode / video chat (The Verge "Muse has a voice mode now" plus TechCrunch "Meta says US users can now video chat with their Muse AI avatar").
- Nov 5: Airbnb AI travel agent, first half of 2027 (TechCrunch plus The Verge "Airbnb is working on an AI travel agent").
- Nov 6: Amazon text Alexa to shop (The Verge "Amazon will let you text Alexa your shopping list" plus TechCrunch "After blocking Muse, Amazon now lets users text Alexa to help them shop").
- Nov 6: Meta Muse Spaces (The Verge plus TechCrunch "Meta introduces Spaces, a new way to collaborate with your Muse agent").
- Nov 6: TechCrunch midterm video plus TechCrunch midterm podcast ("After the midterms, is the AI industry in for a rough two years?" plus "How a Blue Wave midterm might reshape the AI industry"), same feed, identical 56-word summary.

Stories in 2 or more feeds: 5 events (the first 5 above). No story appeared in 3 or more feeds. Nov 4 had 0 cross-feed stories.

Podcast-only or video-only unique items removed for the usable count: Nov 6 had 2 (TechCrunch midterm video/podcast merged as 1, and The Verge "Big Tech lost big in the 2026 election" podcast). Nov 4 and Nov 5 had 0. Usable text stories: Nov 4: 7, Nov 5: 18, Nov 6: 11.

All 44 raw items, Nov 4 to 6, PT date:

5.2 S2: RSS summary sentences and full text fetch

All 44 items Nov 4 to 6: sentences average 1.8, range 1 to 4, median 1. Words average 33.0, range 13 to 56. Sentence count distribution: 1 sentence: 25 items, 2 sentences: 7 items, 3 sentences: 8 items, 4 sentences: 4 items, 0 sentences: 0 items. By day: Nov 4 average 1.86 sentences, range 1 to 4. Nov 5 average 1.43 sentences, range 1 to 3. Nov 6 average 2.25 sentences, range 1 to 4. Note: The Verge summaries were all 56 words and MIT summaries were 55 words in this window, which suggests a fixed excerpt length in those feeds. TechCrunch summaries ranged from 13 to 32 words. OpenAI summaries ranged from 15 to 27 words.

10 selected stories, full text fetch:

ID	Source	Date	Title	Summary sentences / words	Full text: success?	Clean words	Failure reason
S2-01	MIT	Nov 6	I watched a humanoid robot clean my apartment. It felt like a taste of the future.	3 / 55	Yes, HTTP 200	1,417	None. Page HTML contained "paywall" and "metered" template words, but text was returned.
S2-02	TechCrunch	Nov 6	Physicl raises $10M to make the digital world real enough for robots	1 / 17	Yes, HTTP 200	799	None.
S2-03	TechCrunch	Nov 6	Ramp data shows AI spending stalling just as Anthropic nears its IPO	2 / 25	Yes, HTTP 200	1,318	None.
S2-04	The Verge	Nov 6	Amazon will let you text Alexa your shopping list	2 / 56	Yes, HTTP 200	384	None. Short article, 5 body paragraphs.
S2-05	The Verge	Nov 6	Meta's Muse AI can create custom 'spaces' for the version of the app you need right now	3 / 56	Yes, HTTP 200	212	None. Short article, 4 body paragraphs.
S2-06	OpenAI	Nov 5	GPT-6 Cyber: Advancing the frontier of aligned cybersecurity agents	1 / 19	Yes on retry, HTTP 200	1,945	First attempt: read timeout after 30 seconds. Retry with 60 second timeout succeeded. No block or paywall.
S2-07	TechCrunch	Nov 5	Dropbox acquires Tigris Data for $350M to bolster its AI infrastructure	1 / 24	Yes, HTTP 200	577	None.
S2-08	TechCrunch	Nov 5	Claude can now analyze your spending with its new Personal Finance tool	1 / 21	Yes, HTTP 200	671	None.
S2-09	The Verge	Nov 5	Perplexity launches its own take on AI agents for work	3 / 56	Yes, HTTP 200	196	None. Short article, 4 body paragraphs.
S2-10	MIT	Nov 4	Texas was the new epicenter of the AI data center buildout. That might be kaput.	4 / 55	Yes, HTTP 200	842	None. Page HTML contained "paywall" and "metered" template words, but text was returned.

First attempt: 9 of 10. After 1 retry of the OpenAI article: 10 of 10. Clean word counts are after removing duplicate paragraphs and boilerplate (promo banners, "Posts from this topic" UI text, newsletter text). Average clean words: 836. Range: 196 to 1,945.

5.3 S3: claim check table

Source used: full text for all 10 stories. Quotes are short verbatim excerpts from the fetched full text. Planted false claims are marked PLANTED.

S2-01, humanoid robot, MIT, Nov 6:

- Claim: Tau Robotics runs a humanoid-robot cleaning service in San Francisco. In source. Quote: "a new humanoid-robot cleaning service in San Francisco"
- Claim: For now, the robots are piloted remotely by humans. In source. Quote: "For now, the robots are piloted remotely by humans, who watch what's going on via cameras mounted in the robots' heads and wrists."
- Claim: Tau first charged $30 for an hourlong cleaning with a single robot. In source. Quote: "Tau was offering $30 for an hourlong cleaning with a single robot"
- Claim: The robot is four-and-a-half feet tall. In source. Quote: "each four-and-a-half-foot-tall robot"
- Claim (PLANTED): The robot cleaned the apartment completely on its own with no human help. Not in source. No quote. This contradicts the remote piloting stated in the source.

S2-02, Physicl, TechCrunch, Nov 6:

- Claim: Physicl raised $10 million in seed funding led by Inovia Capital. In source. Quote: "has raised $10 million in seed funding led by Inovia Capital"
- Claim: Founder and CEO is Alex de Vigan. In source. Quote: "Founder and CEO de Vigan" and "Alex de Vigan's last business"
- Claim: Studio includes 10,000 3D environments and 100,000 assets. In source. Quote: "a product called Studio with 10,000 3D environments and 100,000 assets"
- Claim: SpAItial collaborated as an early customer, and its latest product Echo-3 was released last week. In source. Quote: "SpAItial, a world model builder, collaborated with Physicl as an early customer" and "the latest of which, Echo-3, was released last week."

S2-03, Ramp AI spending, TechCrunch, Nov 6:

- Claim: Token spend grew only 1.5 percent across August and September, after growing 42 percent in July. In source. Quote: "token spend only grew 1.5% across August and September. To compare, in July, it grew 42% from the previous month."
- Claim: Median firms spend $12 to $15 per employee per month on AI. In source. Quote: "Median firms spend $12-$15 per employee per month"
- Claim: In September, OpenAI cut API prices in half for GPT-6 Sol and GPT-6 Luna. In source. Quote: "In September, OpenAI cut API prices in half for GPT-6 Sol and GPT-6 Luna."
- Claim: Bloomberg reported Anthropic's potential valuation sank from $2 trillion to $1.2 to $1.3 trillion. In source. Quote: "Bloomberg reported Friday that Anthropic's potential valuation sank from the $2 trillion estimated in early October to just $1.2 to $1.3 trillion."

S2-04, Amazon text Alexa, The Verge, Nov 6:

- Claim: Alexa for Shopping can now order groceries and recommend products over text messages. In source. Quote: "The Alexa for Shopping AI assistant can now order groceries and recommend products over text messages."
- Claim: Users can describe products or provide a photograph of the item. In source. Quote: "Users can describe the products they're looking to buy and/or provide a photograph of the item"
- Claim: Texting rolls out to a small group of US customers starting today, then to millions more in the coming weeks. In source. Quote: "rolling out to a small group of Amazon customers in the US starting today" and "It will then roll out to 'millions more customers' in the coming weeks"

- Claim: The Alexa for Shopping experience launched in May. In source. Quote: "builds on the existing Alexa for Shopping experience that launched in May"

S2-05, Meta Muse Spaces, The Verge, Nov 6:

- Claim: Spaces lets Muse build a shopping hub, school dashboard, music tracker, and trivia game. In source. Quote: "allows Muse to build things like a shopping hub, school dashboard, music tracker, trivia game, and more"
- Claim: If you connect a space to a relevant app, Muse updates pricing, dates, and other information in the background. In source. Quote: "If you connect your space to a relevant app, Muse will update pricing, dates, and other information in the background."
- Claim: Spaces is rolling out to all Muse users, with a specialized version of the Muse Wonder AI model. In source. Quote: "Meta is rolling out spaces to all Muse users, along with a 'specialized' version of its Muse Wonder AI model."
- Claim: You can add spaces to the sidebar, move them to the main tab, and schedule when you see them. In source. Quote: "You can add spaces to the sidebar in the Muse app, move them into your main tab, as well as schedule when you see them."

S2-06, GPT-6 Cyber, OpenAI, Nov 5:

- Claim: GPT-6 Cyber scores 48.5 percent on ExploitGym, up from 32.1 percent for GPT-5.6 Cyber. In source. Quote: "GPT-6 Cyber scores 48.5%, up from 32.1% for GPT-5.6 Cyber."
- Claim: It avoided exploiting out-of-scope services in 99.93 percent of tests without its deployment prompt, and 100 percent with the prompt. In source. Quote: "avoided exploiting out-of-scope services in 99.93% of tests without its deployment prompt, and 100% with this prompt."
- Claim: Researchers used it to develop 948 privilege escalation exploits in Linux and identify 81 previously unknown high-severity vulnerabilities in Firefox. In source. Quote: "used GPT-6 Cyber to develop 948 privilege escalation exploits in Linux and identify 81 previously unknown high-severity vulnerabilities in Firefox"
- Claim: OpenAI classifies the model as Critical in cybersecurity under its Preparedness Framework, up from High for GPT-5.6 Cyber. In source. Quote: "we classify the model as Critical in cybersecurity under our Preparedness Framework, up from High for GPT-5.6 Cyber."
- Claim (PLANTED): GPT-6 Cyber scored 99.9 percent on ExploitGym and is now sold to the public as a home security app. Not in source. No quote. The source score is 48.5 percent, and no home security app is mentioned.

S2-07, Dropbox Tigris, TechCrunch, Nov 5:

- Claim: Dropbox is acquiring Tigris Data for $350 million. In source. Quote: "with a $350 million acquisition of cloud technology company Tigris Data"
- Claim: The deal is expected to close in the fourth quarter of 2026, with no plans to reduce headcount. In source. Quote: "transaction is expected to close in the fourth quarter of 2026." and "currently has no plans to reduce headcount"
- Claim: DBX Agent Cloud will initially offer object storage that works with existing Amazon S3 tools. In source. Quote: "DBX Agent Cloud will initially offer object storage as a stand-alone product" and "use it with existing tools and applications built for Amazon S3"
- Claim: Tigris was founded by former Uber engineers and raised $25 million in a Series A last year. In source. Quote: "Tigris Data was founded by former Uber engineers" and "Tigris Data raised $25 million in a Series A funding round last year."

S2-08, Claude Personal Finance, TechCrunch, Nov 5:

- Claim: Claude Personal Finance lets users connect bank and credit card accounts through Plaid. In source. Quote: "users can connect their bank and credit card accounts through Plaid"
- Claim: Access is read-only, so it cannot move, manage, or invest users' money. In source. Quote: "Anthropic says access is read-only, meaning Personal Finance can't move, manage, or invest users' money."
- Claim: It starts rolling out in beta this week to Pro, Max, and Ultra plans in the US. In source. Quote: "Personal Finance starts rolling out in beta this week to users on the Pro, Max, and Ultra plans in the U.S."
- Claim: ChatGPT introduced similar personal finance tools in May. In source. Quote: "ChatGPT, which introduced similar personal finance tools in May"

S2-09, Perplexity Teammates, The Verge, Nov 5:

- Claim: Perplexity's Teammates are always-on work agents that can take on multiple roles in a workspace. In source. Quote: "new always-on 'Teammates' can take on multiple roles within a workspace"
- Claim: Teammates requires a $200 per month Max plan subscription. In source. Quote: "it requires a subscription to its $200 / month Max plan."
- Claim: You can track Teammates' progress through threads in the Perplexity app and interact with them in Slack. In source. Quote: "you can keep tabs on Teammates' progress through individual threads in the Perplexity app, as well as interact with them in Slack."
- Claim: CEO Aravind Srinivas said, "Over time, we envision every org having hundreds of teammates working for each person." In source. Quote: "Over time, we envision every org having hundreds of teammates working for each person,"
- Claim (PLANTED): Perplexity Teammates is free for all users and works without any subscription. Not in source. No quote. This contradicts the $200 per month Max plan stated in the source.

S2-10, Texas data center, MIT, Nov 4:

- Claim: Texas is the fastest-growing data center market in the US. In source. Quote: "Texas is the fastest-growing data center market in the US"
- Claim: Democrat James Talarico won the US Senate seat against Ken Paxton, and Gina Hinojosa won the governor race against Greg Abbott. In source. Quote: "Democrat James Talarico won the US Senate seat against Ken Paxton. Gina Hinojosa won the race for governor against the Republican incumbent, Greg Abbott."
- Claim: On September 21, Abbott directed a key state regulator to halt data center permits. In source. Quote: "On September 21, Abbott directed a key state regulator to halt data center permits."
- Claim: The Stargate Frontier data center in Shackelford County is projected to serve 1,820 megawatts. In source. Quote: "The Stargate Frontier data center in Shackelford County is projected to serve 1,820 megawatts"

S3 totals: 40 source claims, 40 marked "in source" correctly. 3 planted claims, 3 marked "not in source" correctly. Total 43 of 43, 100 percent. Stories with all claims correct: 10 of 10.

5.4 S4: confidence stability

Scores are 1 to 5. P1 is the plain support prompt, P2 is the strict fact-check editor prompt, P3 is the kids'-app trust prompt. See section 2 for exact wording.

Story	P1	P2	P3	Range	Within 1 point?
GPT-6 Cyber (OpenAI, Nov 5, 1,945 words)	5	4	4	1	Yes
Muse Spaces (The Verge, Nov 6, 212 words)	4	3	4	1	Yes
Texas data center (MIT, Nov 4, 842 words)	4	3	4	1	Yes

Notes per story:

- GPT-6 Cyber: P1 gave 5 because every claim is stated with specific numbers in the primary source. P2 gave 4 because the source is OpenAI reporting on its own model, with no independent verification in the text. P3 gave 4 for the same reason: traceable, but vendor self-report.
- Muse Spaces: P1 gave 4 because all 4 claims appear directly in the short article. P2 gave 3 because the article is only 212 words, single-source, and cites Meta without independent detail. P3 gave 4 because each claim is traceable, even if thin.
- Texas data center: P1 gave 4 because the election and project facts are stated directly. P2 gave 3 because the article mixes reported results with analysis and projections, and the election claims have no second source inside the article. P3 gave 4 because the selected claims themselves are traceable.

5.5 S5: first green / yellow / red ratings, 20 stories

Rating rule used: green = safe for ages 5 to 10 and well sourced. Yellow = needs parent review because of a scary, adult, political, or speculative topic, or thin sourcing. Red = do not use for ages 5 to 10. Ratings for the first 10 stories used full text.

Ratings for the last 10 stories used title plus RSS summary only.

20	Franklin Templeton uses OpenAI to support investment research	https://openai.com/index/franklin-templeton	Yellow	Investment research, adult finance topic, thin 1-sentence RSS summary.

Counts: 9 green, 8 yellow, 3 red. Total 20.

6. JSON example of one finished story

Story chosen: S2-05, Meta Muse Spaces, because its full text is short (212 words) and all 4 claims were verified. Confidence is the median S4 score for this story (4, 3, 4 gives median 4). First rating is green from S5.

```
{
  "title": "Meta's Muse AI can create custom 'spaces' for the version of the app you need right now",
  "full_text": "You can create things like a shopping hub, school dashboard, or music tracker directly within Muse. Meta will now allow you to build customized, app-like experiences within its Muse AI assistant. The new feature, called \"spaces,\" allows Muse to build things like a shopping hub, school dashboard, music tracker, trivia game, and more, which you can interact with directly in the app. If you connect your space to a relevant app, Muse will update pricing, dates, and other information in the background. Meta says you can create a new space by describing it, and continue to tweak it by asking Muse. You can also interact with your spaces by checking things off, adding notes, and making edits. You can add spaces to the sidebar in the Muse app, move them into your main tab, as well as schedule when you see them. \"For example, keep your weekly planner up front during the workweek, then swap it for your weekend plans on Saturday,\" Meta says. Meta is rolling out spaces to all Muse users, along with a \"specialized\" version of its Muse Wonder AI model. The company is also looking into ways to share your spaces with other users and collaborate with them.",
